	Low	1748	1709	1659	1598	1525	1442

**NOTES:**

1. Airflow based upon dry coil at 230v with factory approved filter and electric heater (3 element heater size 6000).
2. Airflow at 208 volts is approximately the same as 230 volts because the ECM motor is a constant torque motor. The torque doesn't drop off at the speeds the motor operates.
3. To avoid potential for condensate blowing out of drain pan prior to making drain trap: Return static pressure must be less than 0.40 in. wc. Horizontal applications of 6000 size must have supply static greater than 0.20 in. wc.
4. Airflow above 400 cfm/ton on 6000 size could result in condensate blowing off coil or splashing out of drain pan.
5. Not recommended for use above 0.60 inches water column external static pressure.
6. Shading – Airflow outside 450 cfm/ton.

**STATIC PRESSURE CORRECTION FROM DRY TO WET COIL (inches of water column)**  
 Airflow performance chart above was developed using fan coils with DRY coils.  
 When taking a static reading across a WET coil, adjust the static pressure numbers by **adding** the values in this table (for a given CFM, wet coil will have greater static pressure drop than dry coil).
