

Novent® Tamper-Resistant Refrigerant Caps

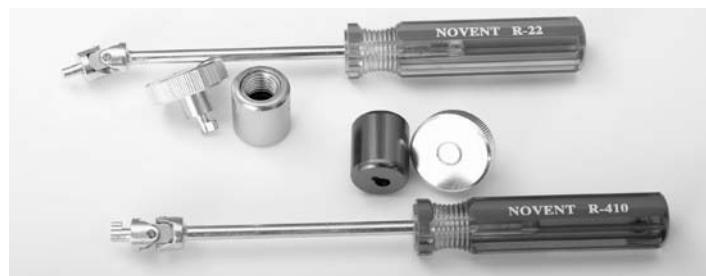

Reduce the danger of refrigerant theft . . .

With this new, innovative product line.

Using a patented design, Novent caps:

- Resist tampering with refrigerated service ports by children and unauthorized personnel.
- Provide tamper-resistant locks for all refrigerant tanks and service ports, including recovery tanks and refrigerant cylinders.
- Help eliminate theft, vandalism and accidental mixing of costly refrigerants.
- Offer corrosion-resistant, color-coded caps to identify type of refrigerant and prevent mixing.
- Consist of quality construction with an O-ring seal that provides positive backup for leaking service valves.

Protect your assets:

- Whether refrigerant theft is motivated by financial gain or intoxication, you should do everything in your power to discourage this activity.
- Novent caps are a smart, inexpensive way to help prevent this growing problem. They require a special tool to apply and remove the product, making it difficult for thieves to access the refrigerant.
- These caps are available for many types of refrigeration units.

Instructions

- Please make sure the caps are correctly identified to match the refrigerant inside the unit. Using the wrong cap will mislabel the refrigerant, causing mixing and possible damage to the system.
- Always wear eye protection and stand to the side, away from possible cap trajectory.
- Remove cap slowly and carefully - contents may be under pressure and can cause injury.
