EASIER INSTALLATION

# C<sup>o</sup>MPATIBILITY

## 1/2" Gas Line

All Rheem tankless water heaters are able to be installed using 1/2" gas line, making the replacement of a tank-type water heater with a Rheem tankless water heater easier and more cost effective. Every installation is unique, but Rheem has designed their tankless water heaters to give contractors the flexibility of using the existing 1/2" gas line piping.

As always, it is required that installers consult the Rheem Use and Care Manual, the Rheem Gas Piping Facts brochure (TK-GPF-12), the National Fuel Gas Code (NFPA 54, ANSI Z223.1), and any other local gas codes when installing a Rheem tankless water heater, especially when considering 1/2" gas line.

For more information, please contact Rheem technical support team at 1-866-720-2076.
