Airflow based on no coil, no filter, no electric heat (pre-accessory external static pressure). When heaters, filters, horizontal drain pan and/or downflow subbase are installed in an application, airflow must be re-calculated by adding the heater static, filter static, and coil static pressures (provided in the following tables) to the pre-accessory external static amount. See Coil Specification Sheet. Add.10 for Horizontal Drain Pan Kit. Add .20 for Downflow Subbase Kit.

AIRFLOW IS BLOWER ONLY, NO COIL ATTACHED
